

# HOP REPORT 2021

## MONTH - AUGUST

YEAR	2021	2020	30-years average
avg. temperature	17,5	21,2	18,3
precipitation	56,6	78,4	70,8
	Day	Value	
max. precipitation	1.8.2021	12,2	mm
min. temperature	25.8.2021	6,3	°C
max. temperature	13.8.2021	33,8	°C

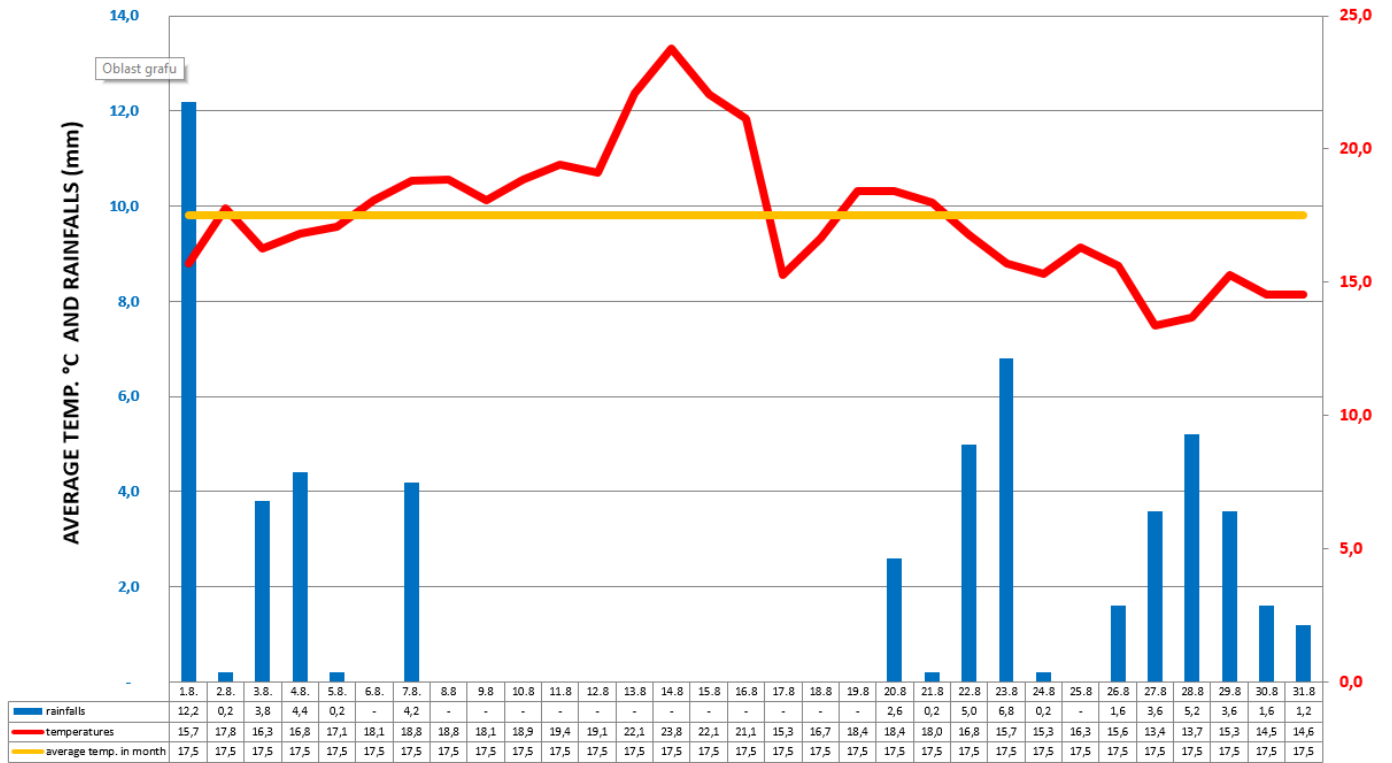

Comments	August was below average as to temperatures and precipitation compared to 30-years average. Most growers started to harvest on 23rd August, some of them started on 28th August only. The end of the harvest is expected at the end of September. Some hop plants are damaged by downy mildew because conditions were favorable for its occurrence for the entire growing period. Nevertheless, most of the hop plants are in very good health condition. According to the results of already harvested hopgardens we can expect a very good yield of around 1,5 t / ha and alpha on average around 3,6% (EBC 7.4).
