Comments	<p>June was above average as to temperatures and precipitation, both compared to 30-years average. The growth of hopplants is approximately 10 days ahead compared to average crop. The most of hopplants are on the top of trellis and starting to bloom. Chemical protection against downy mildew, aphides and red spider mite (in places where necessary) was effected. The hopplants are in very good health condition.</p> <p>According to our opinion an average or slightly above-average yield can be expected (taking into consideration present stand condition).</p>
