

HOP REPORT

MONTH - JUNE

YEAR	2012	2011	30-years average
avg. temperature	17,2	17,6	16,7
precipitation	51,4	70,6	56,0
	Day	Value	
max. precipitation	20.06.2012	16,0	mm
min. temperature	06.06.2012	-0,1	°C
max. temperature	19.06.2012	32,4	°C

Comments	<p>June was above average as to temperatures and on average as to precipitation compared to 30-years average. There is a big difference between hopgardens regarding their growth (very good or very bad). Some hopplants will not reach the top of the trellis. The most of them are starting to bloom. Chemical protection against downy mildew, aphides and red spider mite was effected. The hopplants are in good health condition. The hail storm around the village of Holedeč occured on the beginning of June, about 20 ha of hopgardens was harmed. According to present conditions we can expect average or slightly below-average yield.</p>
