max. temperature	26.4.2019	25,7	°C

Comments	April was on average as to precipitation and above average as to temperatures, both compared to 30-years average. Singnificant rainfalls came only at the end of the month (29th April).
	The course of weather in April was suitable for spring works in hoggardens. Root cutting and wire-stringing was finished in time, wire-stabbing and training of hops is starting nowadays. Chemical protection against alfalfa snout beetle was effected in some hoggardens. We estimate slight increase of acreage of Saaz variety compared to last year. The exact acreage will be informed additionally as it should be announced by UKZUZ within next few days.
